

Removing Password from a PDF File

There's a free Windows utility called **BeCyPDFMetaEdit** that can help you remove passwords from PDF files without making any other change to the document. (I am not sure why the developers picked such a complex name for this useful utility).

Here's what you need to do:

1. Launch the program and it will ask you for the location of the PDF file.
2. Before you select and open the PDF, change the mode to "Complete Rewrite."
3. Switch to the Security tab and set the "Security System" to "No encryption." Click the Save button and your PDF will no longer require a password to open.

Direct Link to the installation file-
